

ICE FOSSIL

You will need:

Small plastic tub

Small treasures

Water

Freezer

Tools for digging

Help the kids occupied and cool on a hot day!

1. Place small household items that are waterproof but hard-wearing like lego, buttons, toy cars, or dinos, into a plastic tub or bowl.
2. Make space in your freezer, put the tub in so it is flat, then pour water into it - making sure the toys sink.
3. Leave to freeze overnight.
4. On a hot day, supply child age appropriate digging tools, tip the ice out onto a tray or onto grass, and let them try and dig for the fossils!
